

The 8-Week Progress Challenge

A practical gym activation for turning body composition measurement into a repeatable athlete journey, with a clear baseline, review point and next coaching conversation.

01 **Baseline**
Create a consistent starting measurement and goal.

02 **Engage**
Give athletes a reason to return and review.

03 **Coach**
Use the result to shape the next training block.

04 **Measure**
Track adoption as well as physical outcomes.

Use this as a working tool

This document is a campaign concept. It is designed to structure a practical operator conversation and identify what should be tested before a wider investment decision.

1. Challenge structure

Use a simple cadence that staff can explain in under a minute.

Stage	Member experience	Operator action
Week 0	Baseline scan + goal	Register participant and capture starting point
Week 4	Progress check	Review adherence and adjust coaching
Week 8	Final assessment	Compare change and discuss next block

Keep it simple

The measurement should support the coaching journey, not become the journey. The most useful activation connects results to a goal and a clear next action.

2. Launch checklist

Use this before opening registrations.

- Define the audience: HYROX, strength, transformation or a selected cohort.
- Set registration dates and measurement capacity.
- Brief coaches on how results will be explained.
- Create a standard goal-setting conversation.
- Agree when repeat measurements will happen.
- Decide what the next-step offer is after the final review.

3. Suggested campaign messaging

Keep the member proposition focused on progress, not technical specifications.

Headline ideas

Progress you can prove. / See what changed, not just what you weigh. / Eight weeks. Two measurements. One clearer picture of progress.

Coach prompt

"Your weight is only one part of the story. Let's look at what changed across the block and use that to decide what we focus on next."

4. KPIs to track

Measure whether the activation is useful to the facility as well as engaging for members.

- Registrations
- First-measurement completion rate
- Repeat-measurement rate
- Programme completion
- Coaching or PT engagement
- Member feedback
- Next-programme conversion
- Any incremental revenue linked to the activation
